8. OBJECTIVE REVIEW OF THE BANK'S STATUS, PERFORMANCE AND DEVELOPMENT, THE MAIN RISK MANAGEMENT STANDARDS

The public limited liability company Bank SNORAS, established as the regional bank in Šiauliai in 1992, in 1993 was renamed to AB Bank SNORAS. During the seventeen years of its activity, SNORAS has become one of the largest banks in Lithuania. Having the most expansive and modern territorial customer service network in the country – ten regional branches of the bank, eleven branch outlets, 231 mini-banks and 339 ATMs - AB Bank SNORAS successfully consolidates its positions in the Lithuanian retail banking market and implements the expansion strategy in the European Union member states.

The strategic directions of the AB Bank SNORAS main activity:

- Retail and companies' banking;
- The service expansion in the bank group's companies;
- Investment banking and companies' finances.

AB Bank SNORAS has its branches in Estonia and Latvia as well as the representative offices in the Kingdom of Belgium, Czech Republic, Ukraine and Belarus. Bank SNORAS owns the controlling shareholding of "Latvijas Krajbanka" – the oldest Latvian bank having the largest network.

AB Bank SNORAS manages six subsidiary companies in the country: UAB „SNORO LIZINGAS”, UAB „SNORO turto valdymas”, UAB „Snoro investicijų valdymas”, UAB „SNORO Media Investicijos”, UAB „VILNIAUS KAPITALO VYSTYMO PROJEKTAI”, and UAB „SNORO valda”, which provide to the participants of the Lithuanian and Baltic market the services of managing monetary funds, leasing and securities funds, real estate management, construction and renovation services as well as the operational supervision and administration of real estate.

AB Bank SNORAS is the third bank in Lithuania according to the attracted deposits and the sixth – according to the managed assets. Over 1,070 thousand clients use the bank's services. The slogan – “The bank closest to me” – reflects Bank SNORAS endeavour to become close to every customer.

In 2009 the bank consistently and successfully strengthened its positions in the Lithuanian retail banking.

The bank shareholders' equity profitability (ROE) reached 5.58 per cent (2008 H1 – 7.1 per cent), the bank asset profitability (ROA) stood at 0.49 per cent (2008 H1 – 0.6 per cent).

The bank constantly complied with all prudential requirements, which on 30 June 2009 comprised:

- ➔ The Bank capital adequacy ratio was 8.42 per cent.
- ➔ The Bank liquidity ratio was 40.03 per cent.
- ➔ Maximum open position in foreign currencies of the Bank was 1.75 per cent.
- ➔ The Bank met Maximum Lending to One Borrower standard.
- ➔ The Bank met Significant Loan standard.

Risk management constitutes the basis of the Bank's activities and the integral part of the Group's operation. The following exposures are the most important to the Group: credit, market, liquidity and interest rate as well as operational risk.

Credit Risk

The Group assumes the credit risk which is the risk that the second party will not be able to timely repay the entire sum. The Group experiences credit risk while providing loans to the clients and also on the inter-banking market.

The Group does not use the credit derivatives. The credit risk in the Group is reduced by demanding the pledges and guarantees.

The Group distributes credit risk among the structural levels by establishing the risk limitations for one debtor, their group, the geographic or economic types of activity. Such risk is managed while performing the monthly reviews, providing reports and preventively controlling the limitations.

Market Risk

The Group assumes the market risk which is the risk that the bank will incur a loss due to the market variables fluctuation. The main types of the market risk are the risks of the interest rates, currency rates and the prices of shares. The Group distributes the market risk among the structural levels by establishing the risk limitations for the position size, the maximum loss, the portfolio diversification and by taking the risk reduction actions.

Such risk is managed while performing the daily positions' assessment by the market value, the limit control and providing regular reports. The value-at-risk (VaR) methodology is used.

The Group experiences the main market risk from the available debt securities portfolio, whose largest part belongs to the Bank. The Bank uses the futures to manage the interest rate risk.

The currency position size remains insignificant. The currency position risk is managed by the limits for the open position size.

Operational Risk

The operational risk is defined as the risk of the direct and indirect losses, which occurred due to erroneous internal processes, the staff's actions, the bank's systems and external events.

The Bank manages the operational risk by using the complex operational risk management system.

The main component of this system is the register of the operational risk events. The employees responsible for the operational risk are appointed in every subdivision of the Bank and in its subsidiary companies. The responsible employees of the Bank's subdivisions fill in the register of the operational risk events by thoroughly describing the operational risk events which occurred in a particular subdivision. All entered events are later systemized and analysed in a centralised manner.

To manage the operational risk, the Bank also applies self-evaluation by using questionnaires. The conclusions of the questionnaire analysis allow to identify the riskiest areas of the processes occurring in the Bank and the areas of the Bank's structure as well as to take preventive measures.

The most important preventive means of the operational risk management is prohibition. Prohibition allows to minimize the losses incurred due to forfeits of tangible assets.

The Bank constantly improves the operational risk management seeking to ensure the security of the Bank's systems and processes.

Liquidity Risk

The Bank devotes a lot of attention to the liquidity risk management. In 2009 the Bank constantly exceeded the requirement of the liquidity standard set up by the Bank of Lithuania (the ratio between the liquid assets and the liabilities min. 30 per cent).

Apart from executing the standards of the Bank of Lithuania, the Bank also uses the internal means of liquidity management. The Bank utilizes the preventive internal liquidity ratios system and constantly analyses monetary flows.

The Bank also constantly monitors the liquidity gap, the ratios of the prematurely terminated deposits as well as the deposit fluctuation tendencies.

The General Interest Rate Risk

In 2009 the Bank constantly monitored and thoroughly examined the ratios of the general interest rate risk and the Bank's interest margin.

The main means of the general interest rate risk management is the interest rate gap report.

9. ANALYSIS OF FINANCIAL AND NON-FINANCIAL RESULTS OF THE ACTIVITY

In 2009, the Bank continued successful implementation of its strategy acting on the market of Lithuanian banks as a universal bank with orientation towards retail banking, developing the performance of subsidiary Latvijas Krajbanka in the Republic of Latvia as well as expanding other spheres of the activity through its subsidiary companies – UAB “SNORO LIZINGAS”, UAB “SNORO turto valdymas”, UAB “SNORAS Asset Management”, UAB “Snoro investicijų valdymas”, UAB “SNORO valda”, UAB “VILNIAUS KAPITALO VYSTYMO PROJEKTAI” and UAB “SNORO Media Investicijos”.

The financial results within six months of 2009 demonstrate effective performance of the Bank and the Group.

According to the unaudited data, within the 1st half of 2009 the household deposits of the Bank increased by more than 17 per cent and exceeded LTL 3,3 billion. The Bank's profit, in comparison to the 1st half of 2008, grew by 35.4 per cent and comprised LTL 24,0 million.

The main articles of the Statements of Income (Loss) of the Group and the Bank are provided in the tables.

13. SIGNIFICANT EVENTS THAT HAVE TAKEN PLACE SINCE THE END OF THE LAST FINANCIAL YEAR

No significant events, which could affect the results of the Bank activity, took place since the end of the reporting period.

14. INFORMATION ABOUT THE COMPANY ACTIVITY PLANS, DEVELOPMENT AND FORECASTS

The beginning of 2009 was marked with the incredibly rapid changes in the local and external financial markets. These factors presently condition a more conservative activity of the Bank in the future.

In 2009 Bank SNORAS will carry out its activity in Lithuania and abroad, seeking to maintain the current market shares and if possible to enlarge them. The Bank will seek to earn profit.

The Bank will take an active position while developing and expanding the segments of the small and medium business clients and retail banking.

In the local market, the Bank will maintain and improve the current customer service network. The number of the network subdivisions will not essentially change. During the forthcoming three years, a minimum expansion of the branch outlets is planned by establishing 1-2 branch outlets. The mini-bank expansion will also be minimal, while devoting the main attention to improving the mini-bank network arrangement.

These actions will improve the customer service quality and will create the conditions for increasing the sales of the Bank's products and services.

Bank SNORAS will be developing its activity through the subsidiary companies of the Bank as well. AS "Latvijas Krajbanka", operating in the Republic of Latvia, will carry out its activity seeking to maintain the current market shares and if possible to enlarge them. AS "Latvijas Krajbanka" will seek to earn profit. Other subsidiary companies of the Bank will be developing their activity seeking to earn profit.

The Bank will continue performing the actions necessary for implementing the adopted decisions concerning the territorial expansion abroad.

The growth of the Bank's assets is essentially associated with attracting financial resources in the internal market as well as the adequate capital injections necessary to ensure the expansion. If a favourable situation arises on the market, the opportunity may be used to attract financing via the debt instrument emissions.

Taking into consideration the currently predominant financial situation in the country and on the external markets, in 2009 the Bank expects to keep the main indexes on the present level. It is likely that the net interest margin will be decreasing as the price of the attracted funds will be growing faster than their employment price.
