2. Accounting principles

The financial statements are prepared in accordance with the legal acts regulating financial accounting and preparation of financial statements in the Republic of Lithuania and Business Accounting Standards.

The Company's financial year coincides with a calendar year.

The figures in these financial statements are presented in the currency of the Republic of Lithuania - Euro (Eur).

The company complies with the criteria of a public interest company established in the Companies' Financial Reporting Law when preparing financial statements.

2.1. Investment property

Investment property is real estate held to earn income and / or capital gains.

Acquired investment property is comprised by the purchase price and any directly attributable costs. Directly attributable costs may include legal fees, property transfer fees and other transaction costs. This accounting principle applies for the whole duration of construction of investment property. Investment property being developed is carried at cost less any impairment losses.

Upon completion of investment property, the Company uses the fair value method to account for investment property. The fair value of investment property is determined based on valuation reports of an independent valuer. The valuation by an independent valuer is performed at least once a year (if there are significant changes that could lead to a significant change in the value of the assets, valuations are performed more frequently).

2.2. Financial assets and financial liabilities

Financial assets include cash and cash equivalents and amounts receivable.

Financial assets are recorded when the Company receives or obtains a contractual right to receive cash or any other financial assets. Amounts receivable are carried at acquisition cost, less impairment loss. Cash and cash equivalents are stated at acquisition cost.

When it is probable that the Company will not be able to recover the amounts receivable, the impairment loss is recognised, which is determined as the difference between the carrying amount of the assets and the present value of future cash flows discounted using the effective interest rate.

Financial liabilities include amounts payable for goods and services received and liabilities under bond agreements issued, loans received.

Financial liabilities are recorded when the Company assumes a commitment to pay cash or any other financial assets. Amounts payable for goods and services are measured at acquisition cost.

Bonds issued are classified as financial liabilities redeemable in one lump sum or in instalments according to a fixed redemption schedule. Bonds issued and loans received are initially recorded at acquisition cost, which is equal to the amount of funds received. Transaction costs are recognised as expenses in financing activities. Subsequently, financial liabilities are measured at amortised cost using the effective interest rate method. The Company has issued non-convertible bonds.

2.3. Effective interest rate method

Effective interest rate method is a method of calculation of amortised cost of financial assets and liabilities and distribution of interest income and expenses over a certain period. Effective interest rate is an interest rate that discounts the estimated future cash flows (including all paid or received taxes that are an integral part of the effective interest rate, transaction costs and other extras or discounts) to the net carrying amount of the initial recognition within the intended period of financial asset and liabilities or (if applicable) within a certain shorter period.

2.4. Foreign currencies

All currency items in the balance sheet are estimated in euros using the exchange rate prevailing at the date of the balance sheet. Assets purchased using foreign currency and accounted for in the balance sheet at the acquisition cost are estimated in euros using the exchange rate prevailing at the acquisition date. Assets whose fair value is measured in a foreign currency are translated into euros in the balance sheet using the exchange rates at the date when the fair value was determined. Foreign currency transactions are stated in euros using the exchange rate prevailing at the date of the transaction. Differences resulting from the settlement of amounts recorded in foreign currencies at different exchange rates are recognised as income or expenses of the reporting period.

2.5. Sales revenue

Revenue is recognised on an accrual basis. Revenue is measured at fair value, net of discounts granted and expected and net of returns and rebates.

When a service transaction is completed in the same period as it is initiated, revenue is recognised in the same period and measured at the amount specified in the contract. When services according to the service transaction are provided for more than one reporting period, revenue is allocated to the periods in which the services are rendered.

The Company's typical operating income consists of rental income. Where the Company operates as an intermediary rather than the main service provider, income and expenses are offset.

2.6. Cost of sales and operating expense

Expenses are recognised on an accrual and comparison basis in the accounting period the income related to the costs is generated. Expenses incurred during the reporting period, which cannot be attributed directly to specific revenue earned and will not generate any revenue in subsequent reporting periods, are recognised as expenses when incurred. Expenses are measured at fair value.

2.7. Borrowing costs

Interest on loans and bond agreements are recognised in the income statement on an accrual basis.

2.8. Income tax

Income tax calculations are based on profit for the year after assessing deferred income tax. Income tax is calculated in accordance with the requirements set forth in the Lithuanian legislation.

In 2022, the corporate income tax rate applied to companies in the Republic of Lithuania was 15% (in 2021 - 15%).

Taxable losses can be carried forward to other reporting periods for unlimited number of periods, except for the losses incurred through transfer of securities and (or) derivative financial instruments. Such carry-forward is cancelled if the Company ceases to carry on the activity giving rise to the loss, unless the Company ceases to carry on the activity for any reasons beyond its control. The losses from disposal of securities and (or) derivative financial instruments can be carried forward for 5 consecutive years and only be reduced by taxable income earned from the transactions of the same nature. With effect from 1 January 2014, tax losses available for carry forward can be used to reduce taxable income of the current tax year by maximum 70%.

Deferred tax is calculated using the balance sheet liability method. Deferred income tax reflects the net tax effects of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for income tax purposes. Deferred tax assets and liabilities are measured using the tax rates expected to be applied to taxable income in the years in which those temporary differences are expected to be recovered based on tax rates enacted or substantially enacted at the balance sheet date.

Deferred tax asset is recognised in the balance sheet to the extent the management believes it will be realised in the foreseeable future, based on taxable profit forecasts. If it is believed that part of the deferred tax asset is not going to be realised, this part of the deferred tax asset is not recognised in the financial statements.

2.9. Impairment

An impairment loss is recognised whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. Whenever the carrying amount of an asset exceeds its recoverable amount, an impairment is recognised in the income statement. Reversal of impairment losses recognised in prior years is recorded when there is an indication that the impairment loss recognised for the asset no longer exists or has decreased. The reversal is accounted for under the same article of the income statement as the impairment loss.

2.10. Recoverable amount

The recoverable amount is the greater of the fair value net of selling expenses and the value in use. In assessing the value in use, the estimated future cash flows are discounted to the present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset.

2.11. Offsetting

Offsetting of receivables and payables with the same third party shall take place when there is a sufficient legal basis for doing so.

2.12. Post-balance sheet events

Post-balance sheet events that are not adjusting events are disclosed in the notes when material.

2.13. Contingencies

Contingent liabilities are not recognised in the financial statements. They are described in the financial statements, except those cases when the probability that resources generating economic benefit will be lost is very low.

2.14. Financial risk management

The Company is exposed to a variety of financial risks in the course of its operations. Risk management is performed by management.

The following main financial risk management procedures are applied in the Company's operations:

Credit risk

The Group does not have a significant credit risk concentration. Credit risks or the risks of counterparties defaulting, are controlled by the application of credit terms and monitoring procedures. Credit risk is controlled by the Parent Company itself and, if necessary, assisted by credit risk management companies.

Foreign exchange risk

The Company has no significant concentration of foreign exchange risk, because the major portion of settlements are conducted in the euro (EUR).

Liquidity risk

The Company is a special purpose development company that does not earn income on its own in the short-term. The Company's activities are financed by the shareholder's funds, taking into account the progress of the project and the need for working capital.

The Company's policy is to maintain sufficient cash and cash equivalents or to secure funding from the parent fund and credit institutions to meet the obligations set out in its strategic plans.

Interest rate risk

The Company's income and operating cash flows are substantially independent of changes in market interest rate. The Company has no significant interest-bearing assets.

The most significant balance sheet items of the Company sensitive to changes in interest rates are issued bonds and received loans. Liabilities are with fixed interest rates, but the fixed interest rate is calculated on the basis of related party pricing, which is as close as possible to the arm's length principle. The Company does not use any financial instruments to manage interest rate risk.

As of June 30, 2022, the investment property consists of a plot of land and unfinished buildings located at Vasario 16-osios str 1, Vilnius. The investment property was purchased in March 2016. The company received a construction permit on March 8, 2021, and construction work began in September 2021.

As at the end of 2021, the recoverable amount of investment property (land with buildings under development) was determined based on the property valuation performed by independent appraiser UAB Newsec valuations as at 31 October 2021. The market value of investment property was determined based on discounted cash flows method using a discount rate of 16% (2020: 18%) and capitalisation rate of 6% (2020: 6%). The cash flows are projected over a 4-year period, assuming an average long-term inoccupancy of 2% and average revenue growth of 2.5-2.0%. Based on the report of independent appraiser, the value of investment property determined using the discounted cash flow method amounted to EUR 8 390 000; therefore, during the year ended 31 December 2021, impairment of investment property of EUR 707 913 was recognised; the impairment was allocated to separate groups of investment property in proportion to their carrying amounts.

Sensitivity analysis of the value of investment property

The recoverable amount of the investment property was determined using a yield rate of 6%. An increase in the yield rate of 0.25% would reduce the recoverable amount of the said investment property by EUR 1 560 000 and a decrease in the yield rate of 0.25% would increase the recoverable amount of the investment property by EUR 1 690 000. Other assumptions remain unchanged as the yield rate changes.
